## EnterprisePOS Available Options

### EPOS Software Modules

Depending on the needs of your business you may want to mix and match different options.

*Internet Update Utility:* update your website by the click of a button! You can define the inventory fields you want that specifically correspond to the fields on your website and have EPOS update the web automatically as you sell stock, change price, update descriptions, add pictures, etc.

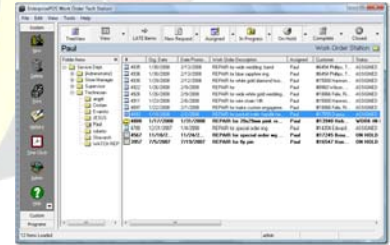

*Archiving Utility:* keep your database nice and trim by extracting old or unused data out of the system with this module. The old data goes into a separate archive database that you can file away. If you ever need the data again, you can always view it or even move it back.

*Customizing Utility:* take any screen, table, field, etc. and change it to fit your needs! Mold the system to exactly fit your line of business! You can even create your own screens from scratch!

*Work Order Station:* track your repair / work-order queue the easy way! See all work orders in the system that are assigned to specific technicians or

groups, see what is in-progress, on-hold, completed, etc. This utility is designed specifically for your shop workers.

*Report Designer:* build your own reports in Crystal Reports® or Microsoft Office!

*Scheduling System:* schedule your purchase orders, accounts receivables, consignments, layaways, ect. ALL in Microsoft Outlook automatically! Have your own email system tell you when things in your EPOS system are due!

*Mass Emailing System:* email your customers automatically each month or so on store specials!

*Inventory Counter:* cut the time it takes to reconcile or count your inventory down dramatically with this little inventory counting module which can use a hand scanner or interface to a PDA or tablet PC!

*Time Clock / Job Clock Utility:* manage your employee hours with this PC time clock that allows your employees to SWIPE using their own driver's license card to clock in or out!

*Wish List Utility:* track a wedding registry or customer desired product list that you plan on ordering later.

Systems

*"Customizing the system is a snap!"*  
**Ron Squires – Hi Tech Data, Inc.**

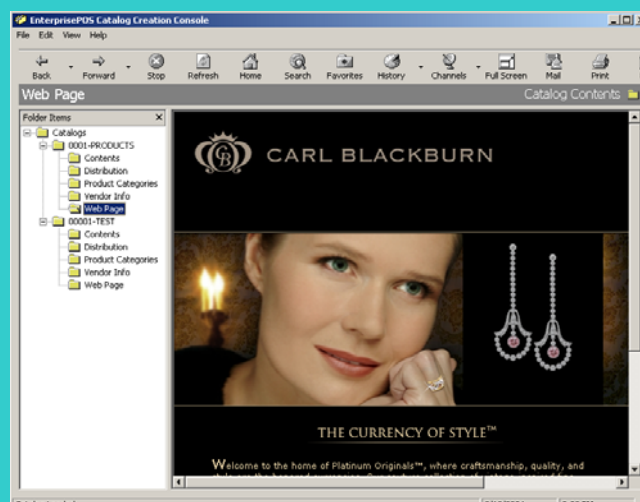

**Catalog Creator:** build your own catalogs for your customers with ease. You can assign catalogs to single or groups of customers (a distribution list) and send them out via email as a file or interactive demo of your product-offering with pictures! You can even export your catalog in a text file for your customers to import into their own system for ordering.

**History Module:** track product history from the first time it is received, to the time it is sold, and all changes in between. Produce nice graphs of the product life cycle.

**Sales Analysis Module:** track your sales and see how specific products or product categories have done in the past and forecast profitability and popularity of items for upcoming periods.

**History Module**  
See product history at a glance!

**Catalog Creator Module**  
Building your product catalog is a snap with integration to your website!
